

Today's office landscape is challenging.

Many different ways of working.
Ever-changing work scenarios.

In this environment,
evolution is everything.

In today's ever-changing office environment, how can you maximise efficiency, flexibility and productivity?

Wireless technology is redefining the workplace, giving people the freedom to move outside the traditional desk-based setting to a variety of different locations within the office environment. At the same time, companies are under continual pressure to make more efficient use of their workspaces.

With this in mind, we asked ourselves...

How can our products extend the office landscape to create more flexible meeting and working scenarios?

How can we reduce the need for expensive, inflexible static walls?

What if the only things that needed
to be fixed were the

stairs, lifts and restrooms?

architectural screens

make this a reality.

Volume furniture systems extend and complement the Orangebox office landscape by providing the opportunity to divide open spaces and create closed or partially closed rooms.

The screens' variety of sizes and configurations means that for the first time, open plan spaces can deliver the same level of scope offered by the combination of fixed cellular space and open plan areas. Not only that, their complete flexibility, simple assembly and moveability means that you can **experiment, alter and fine-tune your office configuration to suit the requirements of a particular team or project**, easily and effectively.

With the addition of Volume systems to the range, Orangebox consolidates its focus on delivering the breadth of **choice and function our clients demand, for today and tomorrow.**

Increasingly, technology allows us to communicate without ever seeing each other.

These spaces fulfil a basic human need for one-to-one communication.

work in peace

Contemporary, open-plan working is increasingly popular and encourages better communication, but it has its challenges. Noise distraction and lack of privacy are a daily frustration and can reduce efficiency.

Airea provides the perfect answer, creating flexible, quiet rooms for private meetings or working undisturbed.

A curved glass office enclosure with a desk and printer inside. The enclosure is made of silver metal frames and clear glass panels. Inside, there is a desk with a printer, a laptop, and some papers. A person is sitting at the desk, working. The background is a plain white wall.

keep noise in

Create enclosed rooms for
printers, photocopiers, shredders
and other noisy essentials.

Cleverly designed breakout areas flex and change to serve a variety of purposes, both formal and informal.

future-proof your workspace

A man in a green sweater is seated at a wooden desk, focused on his laptop. The background is a bright, modern office with other people working at desks, slightly out of focus. The overall atmosphere is professional and collaborative.

Fixed partitions soon become obsolete, but our curved and straight screening allow workspaces to flex and expand to suit your space, your people, your projects.

why build walls?

And when it's time for new or bigger spaces, our products simply move with you.

be more adaptable

When, where and how will your organisation grow?

Nobody knows the future. Our products build a more agile business, helping you adapt your environment at little or no cost.

Whether it's an increase in staff, a change of teams or other demands on space, our screens can be moved and linked within minutes. Once in place, flexibility becomes permanent.

remove the clutter

As workspaces and working patterns change, a coherent, organised environment makes for comfort and efficiency.

Resources, postage, recycling and vending facilities nest tidily within our screens.

Volume's innovative mobile storage solutions create clever, effective stowage for refreshments, catering, laptops and presentation equipment.

Move follows you through your working day to contain the clutter.

conceal what you want

In **open-plan workspaces**, everything is exposed.
Mobile screens create distinct workspaces or specific areas for projects and presentations.

The external architecture is one of permanence and control; on the inside, complete freedom.

A modern office lounge area featuring two curved glass partitions on wheels. A person is sitting on a light-colored sofa with orange cushions, and another person is blurred in the background. A small round glass table with a metal base holds a blue water bottle and a glass. The scene is set against a plain white background.

take a break

Create tranquillity – perhaps an oasis point for short meetings, working alone or simply taking time out.

Research shows that **knowledge is passed effectively when staff are relaxed** – maybe meeting for a drink, a quick bite to eat, or a casual chat.

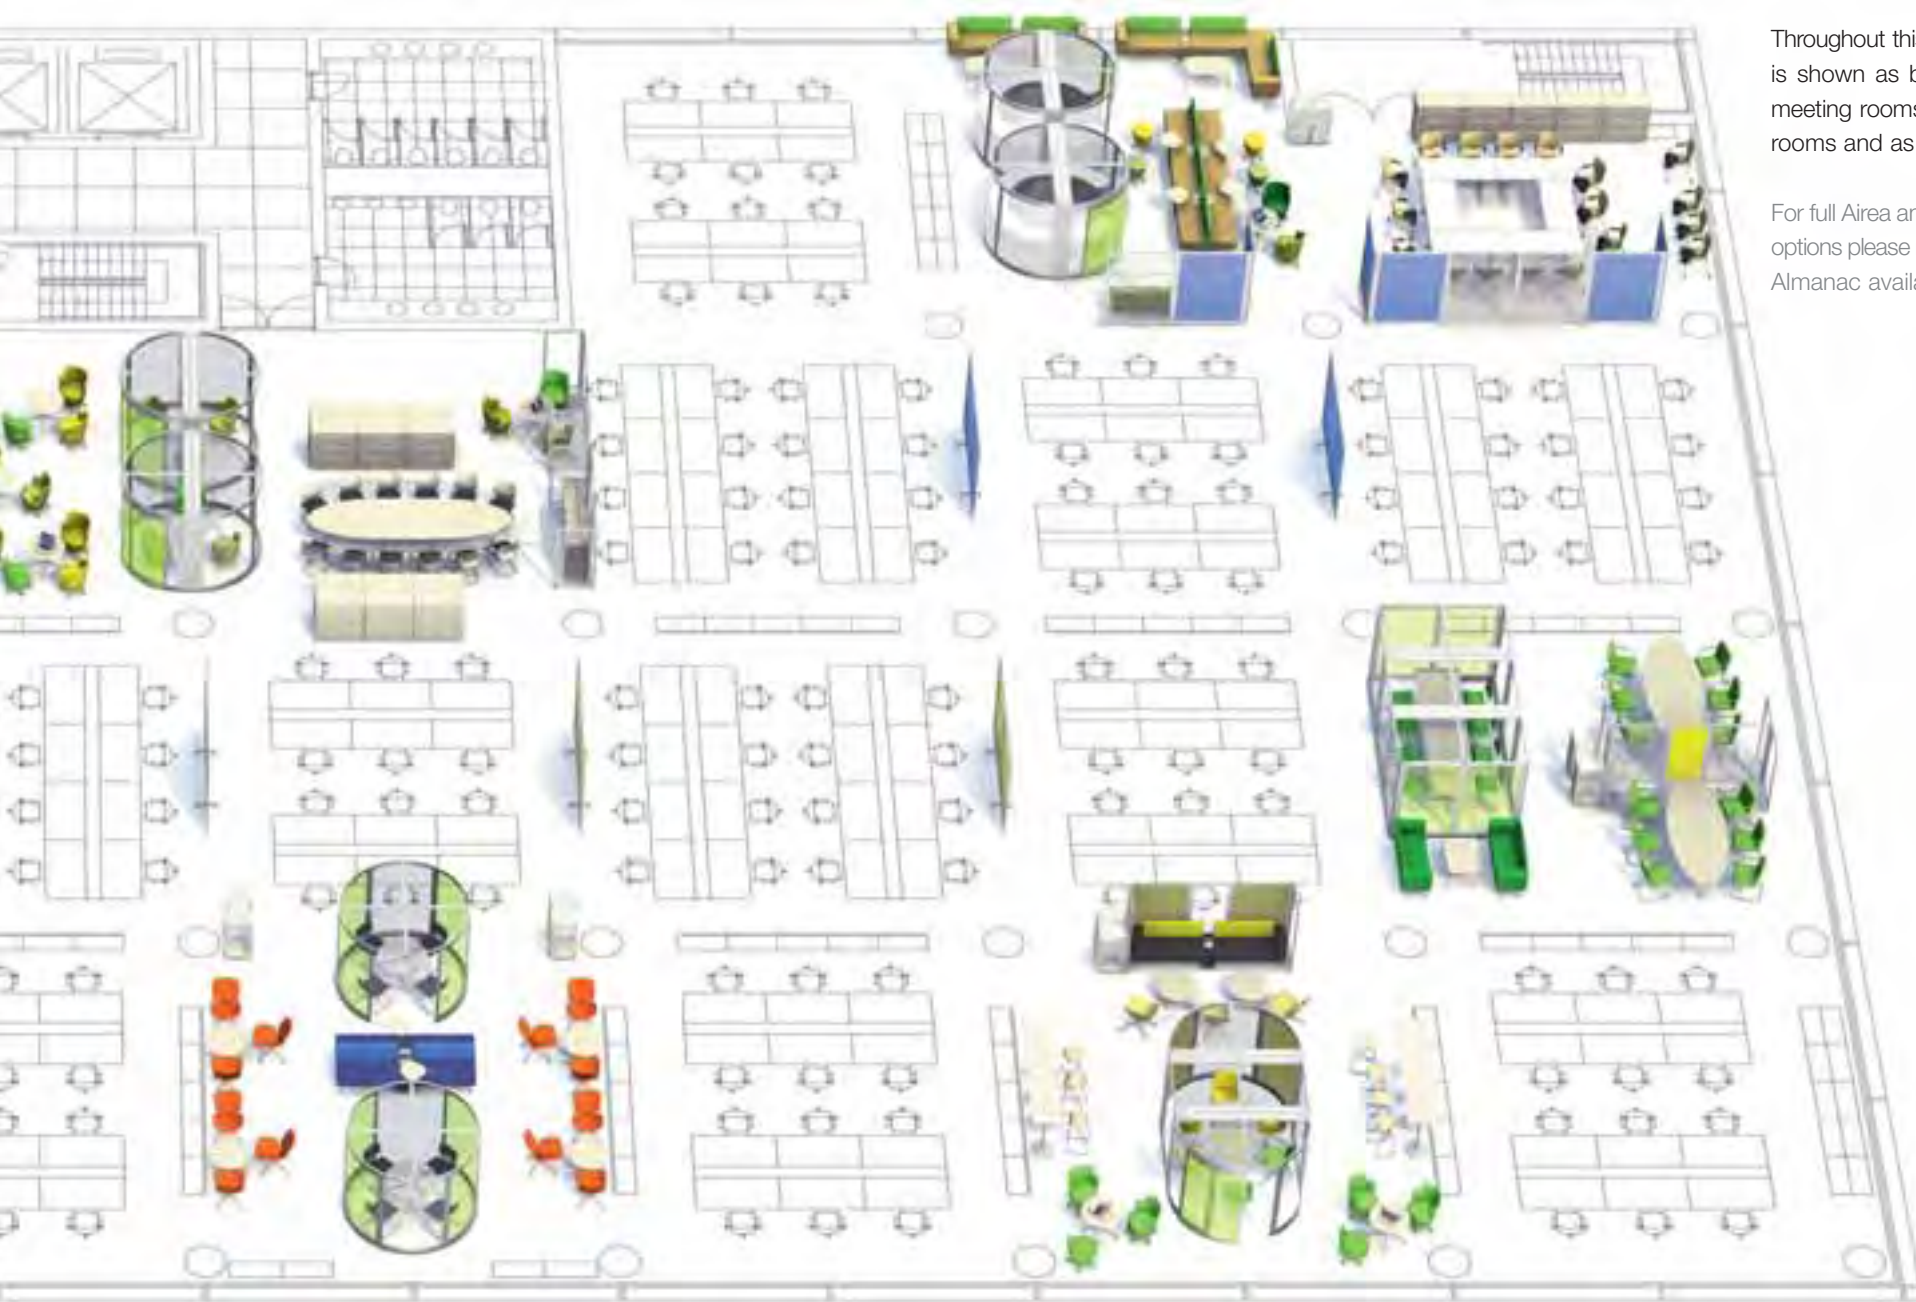

Breakout space is effective when there are seven or eight different ways of working in one office space and **people have a choice of how and where they want to work.**

"Throughout the Workplace, we're seeing a breakdown of boundaries, a weakening of the old hierarchies and a move to openness and simplification

Work environments are critical because good work environments retain good workers"

efficiency, flexibility and productivity?

Throughout this space the Airea System is shown as both formal and informal meeting rooms, stationary/post/printing rooms and as café/kitchen facilities.

For full Airea and screening configuration options please refer to the full specification Almanac available online.
